

A CHILD'S FIRST BOOK ON ASTRONOMY

Nadia P & n8n automation

Look up high into the night,
the stars begin to shine so bright.

The moon glows softly, big and round,
a silver light that's magic found.

Planets dance in skies so wide,
each one spinning on its side.

Mercury's quick, the closest near,
while Saturn's rings are bright and clear.

The sun's a star, a fiery ball,
giving warmth and light to all.

Comets streak with tails so bright,
zooming fast through velvet night.

Galaxies swirl like fairy dust,
millions of stars in cosmic trust.

The Milky Way is where we live,
a spiral home with space to give.

Telescopes help us see afar,
planets, moons, and sparkling star.

Astronomy is fun to know,
the more you learn,
the more you grow.

So dream of space, both near and far,
and wish upon a shooting star.
